45k to operate for 3 months. Is the watergen system this expensive? What do we think about 1 month? I assume we are not covering the costs of operation.

Thoughts appreciated

Michael,

I need to talk to my CEO who is in Germany and present him with a budget. I have requested our

chief engineer to contact the factory in Tijuana to determine our electricity and other costs. If we operate continuously for 3 months which may be a good idea, as we have never done extensive testing of this type, its a little expensive around \$45,000 just for electricity. If we run 24 x 7 for a month this would be a more reasonable cost. Would EPA be able to fund any part of the electricity costs?

I think we will want to sterilize the system before we test unless you want to test when its been sitting for 4+ months. We both know you will get some microbial growth when the system sits but that is not real world conditions unless you are storing in a warehouse, or yard waiting for deployment for a disaster relief situation.

This is a low humidity time of year so its not the best time to test and we would not want to do anything until sometime in January in any event.

I will ask our attorney to review the proposed language so we can get the body of the agreement done except for the SOW.

Thanks,

Roy Schwartz

Hi Roy

Sorry to keep bugging you about this. I have looked over the SOW again and it seems there is some wiggle room for testing arrangements. I think we can work with you to devise an operating schedule that best reflects the intended use of your system, and minimizes the possibility for microbial growth (as this is most likely to occur when a system sits dormant for a period of time – hence our assumption that the unit would need to operate continuously). Would you like me to set up a meeting to chat with your technical folks about this? Are your lawyers satisfied with the revised wording for Para 4.1?

Thanks!

Mike

Ahead of our call today...

Sky H20 have requested that paragraph 4.1 (transfer of funds) is explicitly limited to costs for sampling. I have suggested this language based on our prior conversations

No funds are anticipated to be collected from the Company in the course of this effort. The Company shall incur all costs and expenses associated with the delivery of water samples to the designated EPA Laboratory facility.
